

➤ [visit the Laser App website](#)

Laser App is a form-focused software package designed to speed up the process of filling out paperwork.

Laser App software automatically populates forms from a library of over 23,000 forms that they maintain and keep current from multiple sources. These forms include broker-dealer forms from VSR as well as mutual fund, annuity, insurance, and clearing firm forms from over 600 different providers. VSR has built over a dozen Laser App Forms Groups to download, including VSR Advisory Services paperwork and First Clearing brokerage paperwork.

All forms are provided in a fillable format such that the content can be entered within the Laser App console. The forms can be printed out as completed documents, or as empty forms for filling by hand.

Additionally, Laser App seamlessly integrates with a variety of client database programs and leading CRM software applications to auto-populate fields from existing data. Laser App makes it simple to use existing client data to automatically populate the forms used the most.
